

## **Ministry of Urban Development to showcase aerobic bio-toilet technology under Swachh Bharat Mission.**

In a bid to showcase latest technologies being developed in the area of sanitation and build the capacities of urban local bodies in the country for utilising their benefits, the Ministry of Urban Development (MoUD) has entered into a Memorandum of Understanding with M/s Stone India Ltd, for providing total sanitation solutions using 'Bio-toilets'.

The innovative bio-toilets (ENBIOLET) developed by Stone India uses Aerobic Bio-toilet technology, through which human waste is completely digested by the bio media present in the bio digester tank and converted into non-toxic water and gas, and is expected to provide green solutions for sanitation, as part of the mandate of Swachh Bharat Mission.

In addition to showcasing the ENBIOLET on their official website ([www.swachhbharaturban.gov.in](http://www.swachhbharaturban.gov.in)), the MoUD also proposes to add a capacity building and e-learning module through this portal on the usage of aerobic Bio-toilet technology and alternate technologies in the area of sanitation to all Municipal Corporations, government bodies and PSUs across the country.
